

ABSTRACT

1 A elastomeric cover (300) is disclosed having a perimeter grip (321) for fitting
 2 on a raised lens of a mobile station. The elastomeric cover may have at least one
 3 strap (351), which may encircle parts of the mobile station. Button key-tops may be
 4 covered by the elastomeric cover, wherein the elastomeric cover may flex sufficiently
 5 so that the key-top may actuate a circuit. The elastomeric cover may block fluid
 6 ingress into the mobile station. The elastomeric cover may be removable without the
 7 use of tools.
